TROPICAL CYCLONE BULLETIN NO. 14F

Tropical Storm "ISANG" (OMAI)

Issued at 5:00 PM, 22 August 2021

TROPICAL CYCLONE WIND SIGNALS IN EFFECT

No Tropical Cyclone Wind Signal is currently in effect.

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall

"ISANG" is unlikely to directly affect the weather condition and bring heavy rainfall in the country throughout the forecast period.

Severe Winds

The latest forecast scenario for "ISANG" shows that the hoisting of Tropical Cyclone Wind Signals over any land area in the country remains unlikely. Moreover, its passage is unlikely to enhance the Southwest Monsoon and bring gusty conditions to the country.

HAZARDS AFFECTING COASTAL WATERS

In the next 24 hours, Tropical Storm "ISANG" remains less likely to cause sea conditions within the coastal waters of the country which may be risky to any type of sea vessel.

TRACK AND INTENSITY OUTLOOK

- "ISANG" exited the PAR at 1:10 PM today. This tropical cyclone is forecast to move generally north northwestward until tomorrow early morning and will turn northward tomorrow afternoon towards Jeju Island and Korean Peninsula.
- At 2:00 PM today, "ISANG" was downgraded into a tropical storm. "ISANG" will continue to weaken as it moves over East China Sea and may be downgraded into a tropical depression tomorrow afternoon.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

With this development and unless re-entry occurs, this is the final bulletin for this tropical cyclone.
